(54) IMMUNOASSAY FOR COMPLEX OF HUMAN
 INTERSTITIAL COLLAGENASE AND INHIBITOR
 AND APPLICATION TO CLINICAL DIAGNOSIS

(57) Abstract:

PURPOSE: To determine a human active MMP-1-TIMP-1 complex in a sample material by using a monoclonal antibody which connects specifically with each of human MMP-1 and TIMP-1.

CONSTITUTION: A monoclonal antibody specifically bonding with human MMP-1 is prepared by using purified pro-MMP-1 as an immune source which is obtained by purifying human pro MMP-1 from a supernatant fluid of normal dermoplasts. The monoclonal antibody reacts specifically to the pro-MMP-1 and active MMP-1. For a

solid carrier at the determination according to this immunoassay, a ball of polystyrene or the like well adsorbing protein such as the antibody, a test tube, etc., are optionally selected and used. Meanwhile, an antibody for labelling is an IgG fraction which is obtained by fractioning a substance including the antibody by ammonium sulfate and purifying with an anion exchanger, for instance, an enzyme, a chemical substance or the like. A human active MMP-1-TIMP-1 complex in the blood serum of a patient like a cancer patient who shows sthenia in the activity of collagenase is thus determined and the method is applied to diagnose a group of diseases.
